1. Create a table 'tbl_product' using php.

   ID int primary key auto increment,
   productName varhcar(100) unique,
   productDescription(200),
   productQuantity int,
   productPrice int,
   productImage varchar(100)

2. Create a webform to insert data.

   ┌─────────────────── Product Master ───────────────────┐
   │   │
   │   Product Name: [_____]   │
   │   [   ]   │
   │   Product Description: [   ]   │
   │   [_____]   │
   │   │
   │   Product Quantity: [_____]   │
   │   Product Price: [_____]   │
   │   Image: [Choose File] No file chosen   │
   │   [Submit] [Cancel]   │
   └──┘

3. Create a php file to insert form data to mysql database. (*without pear db*)

4. Create a php file to display all data in HTML table. *Like below*

ProductName	Details	Price	Quantity	Image	Action
RedMi note 3	Mi best version	23500	10		DELETE
Samsung s6	Latest Samsung	35000	8		DELETE
Iphone 5	Best phone	40000	15		DELETE

5. Create a php file to delete data selected from html table.
